

a color filter arranged in the first section; and

a layer arranged in the second section, and being substantially transparent.

56. (Twice Amended) A liquid crystal device comprising:

a first electrode;

a second electrode opposing the first electrode;

a liquid crystal material provided between the first and the second electrode;

a plurality of dot areas arranged in a matrix form at an overlapping portion of the first electrode and second electrode, for display, wherein each of the dot areas includes a first section and a second section;

a color filter positioned between the liquid crystal material and one of the first and the second electrode;

wherein the color filter is selectively arranged in the first section.

61. (Amended) A liquid crystal device comprising:

a first electrode;

a second electrode opposing the first electrode;

a plurality of dot areas arranged in a matrix form at an overlapping portion of the first electrode and second electrode, wherein each of the dot areas includes a first section and a second section;

a reflector arranged outside the first electrode and the second electrode; and

a color filter arranged in the first section, wherein the size of the color filter is smaller than that of the dot area.

62. (Amended) A liquid crystal device comprising:

a first electrode;

a second electrode opposing the first electrode;
